DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Suzuki et al. [JP S47-7821] in view of Ritzen et al. [US 3,709,822].

Suzuki et al. discloses a magnetic ferrite for forming a magnetic core comprising iron oxide, cobalt oxide and zinc oxide as the main component, wherein the iron oxide in the range of 42 to 48 mol%, the cobalt oxide in the range of 44 to 56 mol% and the zinc oxide in the range of 2 to 8 mol%.

Suzuki et al. discloses the instant claimed invention except for the presence of at least one of titanium, tantalum, indium, zirconium, lithium, tin and vanadium.

Ritzen et al. discloses a magnetic material for a magnetic core comprising iron oxide, cobalt oxide, zinc oxide and lithium oxide.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to include lithium in the magnetic ferrite of Suzuki et al., as suggested by Ritzen et al., for the purpose of improving magnetic properties.

Suzuki et al. discloses the claimed invention except for the specific range of the mol%.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to use 42 to 50 mol% of iron oxide, 42 to 52 mol% of cobalt oxide and 3 to

14 mol% of zinc oxide for the magnetic ferrite of Suzuki, since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable ranges involves only routine skill in the art. *In re Aller*, 105 USPQ 233.

Regarding claim 3, the specific wt% of lithium oxide would have been an obvious design consideration based on the intended applications/environments use.

Regarding claims 4-15, Ritzen et al. discloses the magnetic core for use in various magnetic devices such as deflection coil.

The specific uses or intended uses of the insulating magnetic core in any magnetic device would have been an obvious design consideration based on the intended applications/environments use.
